SASAKI INTERNATIONAL FLABÉLOS LÍPO

Application Ultrasonic body contouring

The new fat-cell busting machine uses the latest revolutionary ultrasonic technology for body sculpting and inch loss, without the need for knives, needles or downtime. Flabélos Lípo works in a three-stage treatment process combining the proven techniques of ultrasound, radiofrequency and red light to deliver dramatic fat burning and weight-loss after just one treatment. Flabélos Lípo helps shift up to 2cm of fat tissue per treatment, including around the buttocks, thighs, under arms, abdomen and hips, and is suitable for both women and men. Flabélos Lípo helps to reduce cellulite; provides pain-free inch loss all over the body; improves muscle endurance, strength and flexibility; improves blood circulation; and increases metabolism.

NEOSTRATA THE ENLIGHTEN RANGE

Application Cosmeceutical treatments

NeoStrata has announced the arrival of its new ENLIGHTEN range of cosmeceutical products to reduce pigmentation and promote a brighter, more even skin tone. The Enlighten range provides an effective anti-ageing skin treatment programme for patients with photodamaged skin, tackling unwanted pigmentation and melasma, as well as dull skin tone, fine lines and wrinkles. When used together as directed on a daily basis, skin is visibly brighter and pigmentation reduced after 8 weeks, with more pronounced results from 16 weeks onwards. The products contain a unique combination of high performance, active ingredients which gets to the heart of pigmentation by inhibiting the production of tyrosinase, the enzyme responsible for melanin, and reducing melanosome transfer to the skin's surface. The Enlighten products can also be used in combination with specific pigmentation products from the NeoStrata Treatment segment.
